Past performance is not a guarantee or a reliable indicator of future results and an investment could lose value. All investments involve risk, including the possible loss of capital. Performance results are stated gross and net of model fees. Model net returns are calculated monthly by geometrically linking 1/12th of the highest fee charged to its institutional audience to the gross composite return. Gross returns do not reflect the deduction of investment advisory fees or any other expenses that may be incurred in the management of the account. Gross and net performance data has been calculated in US dollars and reflects the deduction of transaction costs and withholding taxes, if any, and the reinvestment of income. Actual client fees may vary depending on, among other things, the applicable fee schedule and portfolio size. Returns for each client will be reduced by such fees and expenses as described in their individual contract. Advisory fees are disclosed in PGIM Fixed Income's SEC Form ADV Part 2A, which is available upon request. Fees may be higher for commingled accounts, insurance company separate accounts, and trust, corporate, or bank-owned life insurance products. The composite shown may include accounts that are group annuity or life insurance products issued by PFI's insurance company affiliate and its affiliated insurance subsidiaries.

SUMMARY OF CERTAIN RISKS: Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. **Mortgage- and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and while generally supported by a government, government agency or private guarantor, there is no assurance that the guarantor will meet its obligations. **High yield, lower-rated securities** involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. Investing in **foreign-denominated and/or -domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. Currency rates may fluctuate significantly over short periods of time and may reduce the returns of a portfolio. **Commodities** contain heightened risk, including market, political, regulatory and natural conditions, and may not be suitable for all investors. **Diversification** does not ensure against loss.
